Assignment 4

Pranav Wadhwa

March 23, 2022

1. Answer each part TRUE or FALSE

   a. $2^{\log^2 n} \in \mathcal{O}(n^k)$

   b. $n! \in 2^{\mathcal{O}(n \log n)}$

   c. $3^n \in \mathcal{O}(2^{n \log n})$

   d. $n^k \in o(2^{\log n})$

   e. $2^n \in o(n!)$

   f. $\frac{1}{n} \in o(1)$

2. Show that P is closed under union, complement, concatenation, and star.

3. Show that NP is closed under union, concatenation, and star

4. We normally assume natural numbers are represented in binary, such that a number $n \in \mathcal{N}$ is represented by the string $b_{\lfloor \log n \rfloor} b_{\lfloor \log n \rfloor - 1} \ldots b_0, b_i \in \{0, 1\}$, and $n = \Sigma_{i=0}^{\lfloor \log n \rfloor} b_i 2^i$. We could also write a number in unary, where a number $n \in \mathcal{N}$ is represented by n consecutive 1s. The problem of factoring a number in binary is not known to be in P, but what if the number is given in unary? Prove your answer.

5. Suppose the number k and the graph G are given, and we want to know if there exists a subset S of size k from the vertices of G such that there is no edge between them in G. Prove that this problem is NP-Complete.

6. Show the following languge is NP-Complete:

   $$DOUBLE-SAT = \{\langle \phi \rangle | \phi \text{ has at least 2 satisfying assignments } \}$$

7. Let S be a set and let C be a collection of subsets of S. A set $S' \subseteq S$ is called a set hitting set for C if every subset in C contains at least an element in S'. Let

   $$HITSET = \{\langle C, k \rangle | C \text{ has a hitting set of size } k\}$$

   Prove that $HITSET$ is NP-Complete.

8. a. Prove that NP = coNP iff there is an NP-Complete problem in coNP.

   b. Show that if coNP $\neq$ NP then P $\neq$ NP.

9. Show that P is closed under homomorphism iff P = NP

10. Let $CNF_k = \{\langle \phi \rangle | \phi \text{ is a satisfiable cnf-formula where each variable appears in at most } k \text{ places } \}$.

    a. Show that $CNF_2 \in P$

    b. Show that CNF_3 is NP-complete
